

Everyone wants to launch a token. Almost no one can.

The technical barrier to deploying, trading, and graduating a token to a decentralized exchange has locked billions in latent creator value.

\$2.3B+
est. annual value locked in failed launches

WHY CURRENT SOLUTIONS FAIL

The Broken Landscape

Pump.fun dominance

Solana-only — Aptos creators have zero equivalent product.

High technical barrier

Deploying Move contracts requires weeks of expertise.

No liquidity path

DIY tokens die on launch — no automated graduation to DEX.

Opaque price discovery

No bonding curve means prices are easily manipulated.

Fragmented UX

Creators juggle 4+ tools: wallet, indexer, DEX, explorer.

THE MACRO TAILWIND

Why Now

\$847M+

Aptos TVL — fastest-growing L1 in 2024

4.2M+

monthly active wallets on Aptos

ZERO

dedicated token launchers on Aptos today

\$130B

memecoin market cap at peak — demand proven

Aptos is the next home for the token creator economy.

MoveMint is the one product that makes that possible — today.

SUPPLY

Zero competitors on Aptos

No pump.fun equivalent exists on Aptos. MoveMint captures a completely open market with no incumbent to displace.

DEMAND

Creators want permissionless tools

Memecoins & micro-cap tokens generated \$130B in peak market cap. Demand is proven — just not yet on Aptos.

INFRASTRUCTURE

Aptos is production-ready

Sub-second finality, \$847M TVL, Move language safety. The L1 is ready. The app layer is missing.

MOVEMINT

LIVE ON APTOS TESTNET

A permissionless platform to create, trade, and graduate tokens on Aptos — in under 60 seconds.

0.2 APT

launch fee

1%

trade fee

1,283 APT

graduation target

Token Factory

Deploy any fungible token in one tx via Move smart contract.

Bonding Curve

Price discovery: buys push price up, sells return APT.

DEX Graduation

1,283 APT raised → auto-migrate to Hyperion DEX.

Real-time Feed

Live trades, price ticks, leaderboard via Geomi indexer.

Multi-wallet

Petra, Fewcha, Martian, Rise, MiZu + Google OAuth.

Watchlist

Persistent, per-user watchlist stored in localStorage.

How It Works Under the Hood

LAYER 1 · SMART CONTRACTS

Move Contracts

- 1,089-line Move module on Aptos

- Bonding curve formula:

$$\text{price} = 19,029,514,756 /$$

$$(800\text{M} - \text{tokens_sold}) + 61.9$$

- Events: Created, Purchase,

- Sale, Graduated, Debug

- Pre-grad: 0.9% platform fee

- + 0.1% creator fee

LAYER 2 · DATA LAYER

Indexer + RPC

- Geomi No-Code Indexer (GraphQL)

- Aptos Fullnode RPC for balances

- 10-min TTL cache + dedup

- Page-visibility stops polling

- Custom hooks:

useTokenData

useGraduation

useTokenMarketData

LAYER 3 · DEX INTEGRATION

Hyperion DEX

- Hyperion SDK full-range pool

- Threshold: 1,283 APT raised

- → 1,200 APT migrated to DEX

- LP tokens burned (dead addr)

- Post-grad: 0.05% platform

- 0.2% creator 0.05% LP

- GraduationListener monitors

- events continuously

From Idea to DEX Listing in 5 Steps

Total elapsed time: < 60 seconds to launch · < 1 hour to graduate (market-dependent)

** Estimates assume 300 APT avg raise/token. Excludes post-graduation ongoing trade volume.*

Built to Handle 100x Growth Without Rewrites

3-phase architecture embedded in the codebase — not an afterthought.

PHASE 1

NOW

Smart Polling

- Per-client HTTP polling to Geomi
- 10-min TTL cache per user
- Request deduplication layer
- Visibility API pauses polling
- when browser tab is hidden
- Capacity: ~500 concurrent users

~\$0.08 / 1K requests

PHASE 2

NEXT

WebSocket Broadcast

- 1 server polls, pushes to all clients
- 99.95% reduction in API calls
- Sub-second latency for all users
- Redis pub/sub for horizontal scale
- across multiple server instances
- Capacity: ~50,000 concurrent

~\$0.0004 / 1K requests

PHASE 3

SCALE

gRPC Streaming

- Direct Aptos gRPC event stream
- Zero polling — fully event-driven
- Real-time at blockchain speed
- Free data from node subscription
- Horizontal microservice ready
- Capacity: Unlimited

~\$0 / event

Why MoveMint Wins — and Stays Won

Feature	MoveMint	Pump.fun	Cetus (Apt)	DIY / Manual
Aptos-native deployment	✓	—	✓	✓
Bonding curve AMM	✓	✓	—	—
Auto DEX graduation	✓	✓	—	—
Locked liquidity (LP burn)	✓	✓	—	—
Creator royalties on trades	✓	—	—	—
Real-time indexing	✓	✓	—	—
Multi-wallet + Google OAuth	✓	—	—	—
Open source contract	✓	—	✓	—
Scalable to gRPC	✓	—	—	—

Network effects compound: every graduated token increases credibility and creator FOMO.

The future of permissionless finance is being built now.

On Aptos With Move With MoveMint

Our 18-month vision: become the canonical token launch infrastructure for Aptos — expanding to cross-chain graduation, creator DAOs, launchpad curation, and protocol-owned liquidity.
